

Special Issue

Novel Therapeutics for Urological Diseases

Message from the Guest Editor

Urological diseases in men and women encompass a wide range of conditions that pose significant challenges to patients and healthcare providers. These conditions in the female population include urinary tract infections (UTIs), interstitial cystitis, overactive bladder, and pelvic floor disorders that often lead to chronic discomfort, poor quality of life, and sexual dysfunctions and may impact social and emotional spheres of life.

This issue sets out to explore the latest developments in novel therapeutics for urological diseases, highlighting emerging procedures and drugs that could revolutionize care for an often overlooked patient population, offering more targeted and effective approaches.
