Health Service Interventions in Musculoskeletal Disorders

Message from the Guest Editors

Musculoskeletal disorders represent a substantial burden on global health, necessitating innovative strategies in both surgical and non-surgical interventions. With advancements in orthopedic surgery and conservative treatments, there is a critical need to evaluate and share knowledge on effective healthcare practices in this domain. This Special Issue aims to collate cutting-edge research, providing a comprehensive view of current health service interventions in orthopedics. We seek to explore various facets of musculoskeletal diseases, focusing on surgical treatments, conservative approaches, and overall healthcare strategies in orthopedic surgery. This Special Issue aims to foster interdisciplinary collaboration, inviting contributions from clinicians, surgeons, researchers, and healthcare professionals. We welcome submissions including original research, review articles, case studies, and clinical trials. Potential themes include but are not limited to: innovations in orthopedic surgical techniques, effectiveness of conservative treatments, healthcare policies affecting orthopedic practices, and comprehensive management strategies for musculoskeletal diseases.
