Medical Care Services in Orthopedic and Musculoskeletal Trauma Care

Message from the Guest Editors

In the context of rehabilitation in trauma and orthopedics, outcome measures are frequently used to evaluate the characteristics of patients with musculoskeletal disorders in the context of hospital care and in clinical practice. These outcomes can provide important information for researchers who use these outcome measures, using clinical and/or pre-clinical research, as well as providing information in the literature for professionals for clinical practice. In the literature, a strong heterogeneity of tools and procedures used for the benefit of patients with any musculoskeletal disorder can be observed. Thus, this Special Issue seeks to emphasize research that addresses the care of orthopedic patients and pre- and post-surgical care due to trauma, with this approach being through observational research and clinical trials, and will be an important path towards bringing high-quality studies to the area of orthopedics and traumatology. Therefore, we are pleased to invite you to provide clinicians and researchers with studies that strengthen the evidence for an appropriate, literature-based approach to improving care for patients with musculoskeletal system impairment.

Author Benefits

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank:

JCR - Q2 (Health Policy and Services) / CiteScore - Q1
(Leadership and Management)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
