# **Special Issue**

# Advances and Innovations in the Management of Spinal Conditions and Disorders

### Message from the Guest Editors

This Special Issue will present different topics and treatments for spinal rehabilitation and spinal deformity. These papers will examine the evidence relating to spinal deformities together with novel assessment tools, treatment modalities, biomechanics as well as the various types, benefits, and side effects of these diverse treatment approaches. In this special series "Advances and Innovations in Spinal Rehabilitation and therapy in the management of spinal deformities." The included papers will be carefully selected with clinicians, researchers, patients and parents in mind. All of these stakeholders are important links in the management of spinal deformities and disorders. It is our hope that all will remain open to new ideas in the field and will be able to evaluate the material carefully and in ways that are objective and evidence based. We very much look forward to receiving your highly interesting papers (such as Primary research papers; RCTs cohort pre-post studies and potentially case studies (if of sufficiently high quality) qualitative papers, etc; second research, e.g., systematic reviews, narrative reviews).
