Special Issue

Health Disparities and Inequalities in Disease Prediction and Treatment

Message from the Guest Editors

Despite significant progress made in research practices, health disparities persist in the population. To successfully reduce disparities, it is necessary to address individual biology and socio-behavioral structures that affect disparities. This Special Issue aims to address health disparities among diverse groups of people, leading to improvement in treatment and prevention of chronic diseases and related mortality. Studies including diverse sample populations are welcome, as well as studies that broadly explore inequities in health from an epidemiological perspective. Research areas may include (but not limited to) the following:

- Needs assessment to address health disparities among diverse population in different countries.
- Longitudinal studies for early diagnosis and disease prevention among underserved populations.
- Cross-sectional studies on disease trends and available treatment care.
- Use of health informatics and technology in reducing health disparities.
- Role of social media in mitigating disparities among young adults pertaining to health risk behaviors.

We look forward to receiving your contributions.
