

## Special Issue

# Parkinson's Disease: Diagnosis, Treatment and Care

### Message from the Guest Editor

Parkinson's Disease (PD) is the second most common neurodegenerative disease. Many drugs are used for PD symptoms and others are being tested, but given the multi-component nature of the disease, physiotherapy, cognitive rehabilitation and psychological support for the patients and caregivers are also receiving attention. Given that the number of Parkinson's cases is expected to double in the coming years, future studies must be oriented towards finding motor and non-motor markers that can facilitate early diagnosis. Furthermore, it is also important to identify other systematic pharmacological and non-pharmacological treatments. Therefore, we will accept original research articles, critical and systematic reviews, meta-analyses and short communications leading to a greater understanding of the diagnosis, treatment and care of Parkinson's Disease.
