Healthcare Strategies for Patients with Chronic Diseases in an Ageing Society: Second Edition

Message from the Guest Editor

Many developed countries are facing an ageing population and a declining birth rate. According to the World Health Organisation, the population of those aged 60 years and older is expected to reach two billion by 2050. The sustainability of current healthcare systems is threatened by this rapidly ageing population. This Special Issue invites a broad spectrum of research topics regarding healthcare strategies for patients with chronic diseases, including, but not restricted to, diabetes in an ageing society. We will compile original research articles, case reports, and critical reviews (narrative/systematic). The topics of this Special Issue include, but are not limited to, ageing society, patient-centred care, patient satisfaction, quality of care, diet and physical activity for frail elderly people, wearable devices, e-health, m-health, the Internet of Things, digital solutions, and other related topics.
