Special Issue

Telehealth and Remote Patient Monitoring

Message from the Guest Editor

Artificial intelligence (AI) is increasingly being integrated into telehealth and remote patient monitoring, and the potential benefits are substantial. This Special Issue of the journal *Healthcare* focuses on the application of AI in telehealth and remote patient monitoring, exploring the latest research, developments, and challenges in this rapidly evolving field. One of the key advantages of AI in telehealth and remote patient monitoring is the ability to collect and analyze vast amounts of patient data in real time. AI algorithms can quickly identify patterns and anomalies in patient data, enabling healthcare providers to make more informed decisions and intervene early when necessary. This can lead to improved patient outcomes, reduced hospital readmissions, and better overall quality of care.

About the Journal

Message from the Editor-in-Chief

Healthcare is an international, scientific, peer-reviewed, open access journal on health care systems, industry, technology, policy, and regulation, and is published semimonthly online by MDPI. Ocular Wellness & Nutrition Society (OWNS) is affiliated with Healthcare and its members receive discounts on article processing charges.

Editor-in-Chief

Prof. Dr. Lorraine S. Evangelista

Sue & Bill Gross School of Nursing, University of California, Irvine, CA 92697. USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank:

JCR - Q2 (Health Policy and Services) / CiteScore - Q1 (Leadership and Management)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
