

## Special Issue

# Innovations in Forensic Medicine

### Message from the Guest Editor

Forensic medicine is not only the medical field that address legal or criminal issues, but also the field contributing to public health and both social and personal welfares. For those who have injured or suffered from violence, the mechanisms of injuries are determined. Furthermore, psychiatric management is also provided for the victims. Therefore, all patients who are victims of physical or sexual assault, abuse, or trauma have forensic needs. For those suffering from sudden, unexpected, or unexplained death, medico-legal investigations are performed. The task is primarily identifying the cause and manner of death and time of death. Based on these results, criminal investigation is promoted by the police, and preventive measures for the accident, diseases, or crime are also considered. The following fields are suitable for this issue:

- forensic anthropology, and traumatology;
- forensic odontology, clinical forensic medicine, and forensic psychiatry;

### Guest Editor

Prof. Dr. Masahito Hitosugi

Department of Legal Medicine, Shiga University of Medical Science,  
Shiga 520-2192, Japan

### Deadline for manuscript submissions

closed (31 August 2024)
