

Special Issue

Effect of Digital Health among People with Type 2 Diabetes

Message from the Guest Editor

This Special Issue of *Healthcare* will focus on the effects of digital health technology in patients with type 2 diabetes. Over the past two decades, digital health technology has significantly advanced, which has led to the improved management of type 2 diabetes. Patients with type 2 diabetes can now monitor their blood glucose levels, track their food intake and physical activity, and communicate with their healthcare providers by using glucose meters, wearable devices, and mobile applications. In this Special Issue, we invite researchers to submit articles on the topic of the effects of digital technology in the management of type 2 diabetes. Original research or review articles are welcome.
