

## Special Issue

# Forensic and Legal Medicine in the Third Millennium

### Message from the Guest Editors

The recent technological advances in medicine and engineering have facilitated the acquisition of new knowledge and created new opportunities in different research fields of forensic sciences. Such technological progress allows some strongly debated issues (such as a more precise identification of the time of death or precise personal identification using algorithms) to be confronted and solved, while also posing new medico-legal, ethical, and deontological issues that healthcare professionals will inevitably face (such as in the case of the use of telemedicine and artificial intelligence or the themes of the end or beginning of life).
