

## Special Issue

# Innovations in Chronic Patient Management: Monitoring, Evaluation and Rehabilitation

### Message from the Guest Editors

Monitoring plays a key role, with the advent of advanced medical devices and mobile applications that enable real-time tracking of patients' conditions, facilitating early detection of problems and personalized care. Chronic patient assessment has benefited from advances in artificial intelligence and data analytics, allowing for more accurate and predictive assessment of disease progression and response to treatment. In addition, rehabilitation has evolved with innovative therapies, such as tele-rehabilitation and virtual reality, which make recovery more effective and accessible.

This Special Issue aims to collect the latest innovations that are revolutionizing the way these patients are managed. It brings together research and case studies that highlight these innovations and their impact on chronic patients' quality of life. From early detection to effective rehabilitation, emerging technologies and approaches are transforming the way healthcare professionals approach chronic disease. This compilation of knowledge promises to enrich clinical practice and improve the management of chronic patients worldwide.

### Guest Editors

Prof. Dr. Araceli Ortiz-Rubio

Dr. Alejandro Heredia-Ciuro

Dr. Andrés Calvache-Mateo

### Deadline for manuscript submissions

15 December 2025
