Obesity and Overweight: Prevention, Causes and Treatment

Message from the Guest Editor

The global prevalence of obesity and overweight continues to rise, posing significant challenges to public health systems worldwide. Obesity is a complex condition with multifaceted causes, including genetic, behavioral, and environmental factors, and it significantly increases the risk of various chronic diseases, such as diabetes, cardiovascular disorders, and certain cancers. Understanding the underlying causes and identifying effective prevention and treatment strategies are crucial to tackling this growing epidemic. We are pleased to invite you to contribute to this Special Issue, which aims to explore the prevention, causes, and treatment of obesity and overweight. The focus aligns with the scope of *Healthcare*, which addresses the improvement in health and healthcare systems globally, particularly through evidence-based practices. This Special Issue aims to highlight innovative research on obesity prevention, causal pathways, and therapeutic interventions, offering insights into both individual and population-level strategies to mitigate the health risks associated with obesity.

About the Journal

Message from the Editor-in-Chief

Healthcare is an international, peerreviewed, open access, multidisciplinary journal. Original research articles, short communications, review articles, and symposium highlights are welcomed.

Healthcare hopes to influence global health and disease aspects, and hopes to gain high visibility and acceptance by the scientific and healthcare community and will dedicate itself to covering special and specific topics in special issues.

We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Lorraine S. Evangelista

Sue & Bill Gross School of Nursing, University of California, Irvine, CA
