

## Special Issue

# Artificial Intelligence (AI) and Machine Learning (ML) in Human Health and Healthcare

### Message from the Guest Editor

The ongoing innovations from the field of Artificial Intelligence (AI) and Machine Learning (ML) are playing a powerful role, influencing the lives of millions through health, safety, education, and other opportunities intended to be shared across all segments of society. In healthcare, AI is bringing a paradigm shift powered by the increasing availability of both structured and unstructured data and rapid development of big data analytic methods. The ultimate goal of AI in healthcare is to re-humanize medicine by providing a set of tools to health professionals so that they can focus more on patient care by enabling the 4P model of medicine (predictive, preventive, personalized, and participatory) and therefore patient autonomy. This Special Issue invites manuscripts (research, review, opinion, and case studies) on AI- and ML-based ongoing progress and related development to influence human health through healthcare systems, industry, technology, and ethical issues.

### Guest Editor

Dr. Md Mahmudur Rahmanon

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

#### Journal Rank:

JCR - Q2 (Health Policy and Services) / CiteScore - Q1  
(Leadership and Management)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
