

## Special Issue

# Neuromodulation and Neuroplasticity in Chronic Pain: New Therapeutic Tools

### Message from the Guest Editors

Physiotherapy is the science that offers non-pharmacological therapeutic interventions aimed at preventing, treating, and alleviating the symptoms of different ailments. The objective of healthcare is to address chronic pain due to its high prevalence in the population. Physiotherapy has a fundamental role in the development of therapeutic strategies that improve the management of chronic pain: nociceptive, neuropathic, and nociplastic, offering better quality of life and functionality to those who suffer from them and helping to identify the personal impact of the disease. The advances offered by neuromodulation through non-invasive techniques such as transcranial magnetic stimulation and transcranial direct current stimulation are an alternative to pharmacological treatments to which patients do not respond adequately. The aim of this Special Issue is to include studies that integrate non-invasive neuromodulation as a treatment in the approach to chronic pain, showing the beneficial effects in the different spheres involving the patient.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

#### Journal Rank:

JCR - Q2 (Health Policy and Services) / CiteScore - Q1  
(Leadership and Management)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
