

Special Issue

Anesthetic Management of COVID-19, Post-COVID-19, and Long COVID-19 Patients

Message from the Guest Editors

The outbreak of COVID-19 changes our work as anesthesiologists. Scientific literature has contributed to the knowledge of this virus and its related infectious diseases, with the number of submissions and articles around the world increasing exponentially as a result. The World Federation Society of Anesthesiologists (WFSA) is actually working to curate, share, and disseminate practical COVID-19 guidance for anesthesia and perioperative care providers. However, little is known about the anesthetic management of patients with COVID-19, long COVID-19, and post-COVID-19. The aim of this thematic series is to report clinical practice suggestions, based on the current literature and clinical expertise, on the anesthetic management of COVID-19, long COVID-19, and post-COVID-19 patients. In this Special Issue, we aim to fill the research gap regarding the impact of COVID-19 and its related complications on preoperative, intraoperative, and postoperative anesthetic management. Therefore, we welcome articles, reviews, and commentaries. Find more information at: [Special Issue "Anesthetic Management of COVID-19, post-COVID-19, and long COVID-19 Patients"](#)
