

## Special Issue

# Health Assessment of Nutrient Intake and Food Security

### Message from the Guest Editors

The latest report pointed out that after COVID-19, the hunger situation of the world's population has deteriorated sharply, and about one-tenth of people face food shortage worldwide. As hunger continues to spread, it is imperative to control food security. Likewise, nutrient intake is important for maintaining health, especially for those who need special care. The current situation determines that under the premise of increasing grain production, we also need to ensure the increase in grain production and strive to achieve a win-win situation between grain increase and ecological protection. This Special Issue aims to provide a platform for researchers to share their work on food security and nutrition intake related to health assessment, especially in the context of epidemiology, food safety and public health. Submissions are welcome, including, but not limited to the following topics:

- Food security and human health;
- Nutrient intake and chronic disease development;
- Safety concerns for different dietary patterns and related health risks;
- Nutrient intake and daily healthcare for different patients.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

#### Journal Rank:

JCR - Q2 (Health Policy and Services) / CiteScore - Q1  
(Leadership and Management)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
