

Special Issue

Food Safety and Its Impact on Health and Healthcare in the Age of COVID-19

Message from the Guest Editor

Today, COVID-19 continues to represent an immediate and unpredictable health risk in food supply/consumption. As a result, it is theoretically critical to estimate the health risk of food processing and the responses of healthcare systems in the age of COVID-19. As an international journal with global impact, *Healthcare* is launching a Special Issue on these issues with the aim to publish high-quality papers on recent investigations. This Special Issue seeks empirical and practical studies, examining the response of health systems around the world to the risk posed to food safety by the virus that causes COVID-19, specifically on topics including but not limited to:

- Food safety risk assessment in the age of COVID-19;
- Healthy risk associated with food consumption;
- Public psychology or/and physiological responses;
- Strategies of food production/consumption systems;
- Challenges and responses of healthcare systems/sectors;
- Health policies;
- Appetite and healthy diet;
- Other.
