Advances in Cancer Rehabilitation

Message from the Guest Editors

Cancer diseases require particular attention due to their consequences for physical, psychological and social health. Cancer rehabilitation is a critical process of cancer care available before, during and after cancer treatment and involves many types of specialists working together to develop a personal rehabilitation plan that considers the preferences, strengths and goals of cancer patients. Cancer and oncological treatment can result in severe health problems and may be one of the leading causes of disability; however, participating in the cancer rehabilitation program may help patients experience a fuller or quicker recovery. Therefore, we are inviting the submission of papers presenting current clinical trials and implemented projects in the field of oncological rehabilitation, highlighting the progress of cancer patient rehabilitation.
