Special Issue

Systematic Evaluation of Chronic Injury Caused by COVID-19

Message from the Guest Editor

The daily increasing cases and deaths caused by COVID-19 continue to shock the whole world, since the first reported case in Wuhan City in China in December 2019 and the WHO declared the global pandemic in March 2020. Has the virus evolved through the generation of many cascades of human to human transfection? Could race be a determinate factor of the high mortality? There are simply too many outstanding questions that require collective efforts from multidisciplinary scientists. In this Special Issue, we are interested to see what chronic injuries may be caused by COVID-19? Submissions could be case reports from hospitals, clinical observation from ICUs, or clinical consultations of follow-ups. As the world is tackling this great challenge, we will have an open mind in reviewing your manuscript in an effort to collect as much evidence as possible.
