Clinical and Dynamic Psychology in Medical Settings: The Patient-Centered Care

Message from the Guest Editors

The patient-centered model of care aims to overcome the boundaries between medicine and psychology in clinical settings, focusing on the importance of taking into account not only the disease but also the patients' characteristics (in terms of needs, preferences, values, personalities, psychopathologies, and so on). In this framework, personalised medicine addresses the urgent need to tailor medical treatments to the patients' psychological features. It is interesting to think that psychological factors will be progressively recognised as part of the clinical and diagnostic decision process.

Starting from these premises, we call for papers addressing the role of the patients' psychological and psychodynamic factors in influencing the onset, adjustment, and clinical response to their treatments, with particular attention on the doctor-patient relationship and therapy adherence. Papers on the efficacy/effectiveness of psychotherapy in medical settings are welcomed as well.

About the Journal

Message from the Editor-in-Chief

Healthcare is an international, peerreviewed, open access, multidisciplinary journal. Original research articles, short communications, review articles, and symposium highlights are welcomed.

Healthcare hopes to influence global health and disease aspects, and hopes to gain high visibility and acceptance by the scientific and healthcare community and will dedicate itself to covering special and specific topics in special issues.

We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Lorraine S. Evangelista

Sue & Bill Gross School of Nursing, University of California, Irvine, CA
