## Message from the Collection Editor

The wellbeing of the oral cavity has been of great interest in recent years. For this Special Issue, we wish to consider manuscripts that can lead to clarification of the aspects related to healthcare and oral pathologies, like simple and complex oral rehabilitation of edentulism both in normal patients and those affected by serious systemic diseases, the treatment and prevention of oral diseases, malocclusions, tempomandibular joint diseases. The use of nanotechnologies in the rehabilitation of patients with surgical outcomes, and the prevention and treatment of pathologies that can affect the presence of dental elements in the oral cavity. The published papers will contribute to achieving oral wellbeing and a better quality of life, suggesting possible suitable prevention and therapy protocols for the multiple pathologies of the oral cavity.
