# **Special Issue**

# Diabetes and Its Relation to Inflammation

## Message from the Guest Editors

As a key contributor to metabolic diseases, the proinflammatory response is the focal point of the area of metabolic inflammation research. Particularly, children and adolescents affected by type I diabetes are exposed to a high risk of systemic complications and require multifactorial risk-reduction strategies beyond glycemic control. There are increasingly complex questions, with a need to leverage data to identify risk factors and potential correlations between type 1 diabetes in childhood and adolescence. This Special Issue focuses on high-quality research papers that address significant developments in the emerging knowledge about type I diabetes in childhood and adolescence. Suggested topics include: current concepts about the role of inflammation in diabetic children and adolescents: the development of new treatment strategies for type I diabetes; and the systemic effect of peripheral inflammation in pediatric diabetes.

Louise Herrington School of Nursing, Baylor University, Dallas, TX 75246-1754, USA

### **Author Benefits**

## **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

## **Journal Rank:**

JCR - Q2 (Health Policy and Services) / CiteScore - Q1 (Leadership and Management)

### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
