

## Special Issue

# Detection, Prevention, and Education of Risk Behaviors among Children and Adolescents

### Message from the Guest Editors

Risk behaviors are associated with a higher incidence of depression, unintentional injury, violence, drug use, pregnancy, STDs, disability, trauma, and premature death. There is a growing interest in understanding risk behaviors during childhood and adolescence due to increasing rates of mental health problems and preventable deaths globally. Evidence-based knowledge contributes to developing detection, prevention, and education strategies to tackle the adverse consequences of risk behaviors. This Special Issue aims to provide an updated view of risk behaviors in children and adolescents, with a particular interest in new and emerging topics and prevention and educational efforts to promote healthy growth. We are especially interested in publishing manuscripts from researchers in the Americas, Africa, and other emerging countries, but we welcome manuscripts from all over the world.
