

Special Issue

Innovations in Ecological Public Health and Health Education

Message from the Guest Editors

Ecological public health is an arena of scholarship and practice focused on the interrelationships between the health of humans, animals and ecosystems. Whether in public health, medicine or medical specialisms such as paediatrics, and across scales from rural through to global health, there is a growing call from students to learn more about human health in the context of the living world. Pandemics, not only COVID-19 but also Syndemics, illuminate the complex interplay between structural inequities and the disproportionate effects of ecological events on a range of equity deserving populations.

This special issue is intended to foreground and celebrate work that is advancing equity and diversity informed approaches to understanding the interplay between a range of determinants of health (social, environmental, ecological, planetary, Indigenous).
