Ergonomics Study in Healthcare Assistive Tools and Services

Message from the Guest Editors

Healthcare assistive tools and services are important for addressing health problems and improving the quality of life. Ergonomics in healthcare assistive tools and services is focused on how to design these tools and services according to the users' characteristics, abilities, and limitations, i.e., on the basis of human-centered design. The requirements of the users should always be considered in the design process. Furthermore, usability evaluations of the healthcare assistive tools and services are necessary to confirm the safety, comfort, effectiveness, and satisfaction of the patients or users.

is serving as of this Special Issue, with as Co-. If you would like to submit a manuscript or have questions concerning the submission of a manuscript, please contact the
