

## Special Issue

# Breast Cancer Diagnosis, Prevention and Control

### Message from the Guest Editors

Neoplasms are common and cause concern in medical healthcare systems. There is growing evidence of environmental risk factors that can be monitored. Thus, research has led to better prophylaxis and reduced exposition. There is a strong need to intensify prevention, health education and proper lifestyle promotion. However, secondary activity, including modern diagnostics, increases early diagnosis, leading to increased successful oncologic treatment. In this Special Issue concerning breast cancer, we will discuss a wide variety of topics.
