

## Special Issue

# Evidence-Based Practice in Occupational Health: Development and Adaptation of Psychometric Instruments

### Message from the Guest Editors

This Special Issue aims to collect original research articles and comprehensive reviews that address the development and adaptation of psychometric instruments specifically within the context of occupational health. By focusing on validity evidence and the methodological rigor required for instrument adaptation and development, this Special Issue seeks to enhance the tools available to occupational health professionals, aiding in precise and contextual diagnoses and interventions. In this Special Issue, we welcome a range of articles including, but not limited to:

- Studies on the development of new psychometric instruments tailored to occupational health.
- Studies that provide validity evidence of existing instruments in different cultural contexts.
- Comparative research on various psychometric tools assessing similar constructs.
- Systematic reviews and meta-analyses on the application and effectiveness of psychometric instruments in occupational health.
- Cross-sectional studies focused on the cultural adaptation and standardization of assessment instruments.

We look forward to receiving your valuable contributions.
