

Special Issue

New Trends in Forensic and Legal Medicine

Message from the Guest Editor

The purpose of this volume is to analyze the most promising lines of research that have been proposed in the various traditional sectors of forensic medicine (forensic pathology, forensic anthropology, forensic toxicology, forensic hemogenetics, forensic entomology, damage evaluation) and to explore what new fields of interest in the discipline may be for the future. In this last topic, attention will be focused on on the relationship between forensic medicine and clinical risk management, on the development prospects of an environmental forensic medicine, on the medicolegal implication of artificial intelligence, and on the development and consolidation of clinical forensic medicine, at the patient's bed. This Special Issue invites works from leading researchers working on individual aspects of this topic.
