

## Special Issue

# Promoting Preventive Care and Health Promotion in Primary Care

### Message from the Guest Editor

Primary care serves as the cornerstone of effective and equitable health systems. As the first point of contact for individuals and families, it plays a crucial role not only in diagnosing and managing acute and chronic conditions but also in promoting health and preventing disease across the life course. This Special Issue brings together original research articles, reviews, and case studies that explore innovative models, tools, and policies aimed at strengthening the role of primary care in prevention and health promotion. Topics include, but are not limited to, the following: screening and early detection programs, lifestyle interventions, digital health solutions, community-based initiatives, equity in access to preventive services, and interprofessional approaches to care.
