Special Issue

Gynecological Cancer Diagnosis and Prevention

Message from the Guest Editor

Oncology strives for screening programs and early diagnoses. The aim of this Special Issue is to focus our attention on gynaecological cancer and the possibility of preventing these tumours, tacking stock of the situation. The World Health Assembly in 2020 calling for the "Elimination of Cervical Cancer" by 2030 through achieving the following three targets: vaccination, screening, and precancerous lesion treatment. Annual pelvic ultrasounds allow us to see the uterus, ovarians, and fallopian tubes, as well as the presence of cysts and fibroids, thus presenting a potentially valid strategy for the early diagnosis of endometrial cancer. Several tests have been evaluated as potential methods of screening for ovarian cancer. We hope to clarify these delicate aspects of oncological gynecology.
