

Special Issue

Human Health Related to Social, Ambient and Built Environment

Message from the Guest Editor

Acknowledging the key roles of equity and diversity in science as well as recent rapid transitions in our living environment mostly due to climate changes and the COVID-19 pandemic, the scientific community has a mission to publish high-quality epidemiologic research and methodologically sound innovations, with emphasis on human health related to climate change and the social, ambient, and built environment. This Special Issue of Healthcare seeks commentaries, original research, short reports, and reviews on human health associated with exposure to the social, ambient, and build environment. This Special Issue aims to stimulate communication between environmental epidemiologists, social scientists, exposure experts, and public health policymakers, as well as to promote methodological advances and strengthen environmental and public health policies. Papers published in this Special Issue are expected to educate and inform readers, influence policy, and improve public health.
