Chronic Pain Management in Vulnerable Groups

Message from the Guest Editors

Pain management is considered a fundamental human right. Despite that, chronic pain conditions are among the top ten causes of years lived with disability. When considering vulnerable populations (older people, children, people with cognitive impairments, people in low-income communities or those living in poor conditions), chronic pain conditions seem to have increased the burden on life and management difficulty. There is a constant and increasing need to understand what factors influence pain management for vulnerable populations, and what are the strategies that may be developed or implemented to circumvent those factors. As such, I invite you to contribute to this Special Issue.
