

Special Issue

Innovations in Interprofessional Care and Training

Message from the Guest Editor

Interprofessional collaboration occurs when healthcare professionals from different backgrounds assemble to care for patients or train students to do so. With the onset of the global COVID-19 pandemic, there has been a disruption of many of these team-based approaches due to the implementation of virtual care or care having occurred in alternate settings. This Special Issue of *Healthcare* focuses on recent successes and/or failures in the implementation of patient-centered, interprofessional care; the effectiveness of the hybrid/virtual instruction of the healthcare workforce, the patient's satisfaction as a recipient of interprofessional care, and programmatic assessments or project plans for advancing the health of populations using novel combinations of health workers as part of an interdisciplinary team. We welcome and encourage research from interprofessional teams, including virtual care, digital innovations, e-Health, remote home monitoring, and/or provider combinations such as community health workers and licensed providers or community paramedicine programs.
