Special Issue

Innovative Approaches in Pediatric Urinary Care

Message from the Guest Editors

Innovative pediatric urologic care is a rapidly evolving field. Technology is advancing, offering new and improved equipment for minimally invasive surgeries and enhanced imaging techniques. Further scientific advances have enabled innovative treatment approaches, with bioengineering and tissue regeneration and major pharmacological advances. Treatments are increasingly customized based on the child's condition and specific needs. Another advancement is recognizing the impact of urological conditions on a child's psychological and emotional well-being, with a growing emphasis on integrating psychosocial support into treatment plans. Telemedicine allows for remote consultations and follow-ups, making it easier for families to access care without frequent hospital visits, and innovations in wearable technology enable continuous monitoring of urological health, providing real-time data to inform treatment decisions. These advancements are making pediatric urologic care more effective, less invasive, and better tailored to the individual needs of young patients. This Special Issue aims to collect the latest innovations that are revolutionizing the way patients are managed.

Author Benefits

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank:

JCR - Q2 (Health Policy and Services) / CiteScore - Q1 (Leadership and Management)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
