Dementia Caregivers' Wellbeing—Challenges and Opportunities

Message from the Guest Editors

This Special Issue invites researchers to submit high-quality original research articles, systematic reviews/meta-analyses and short papers in relation to dementia caregiving. We encourage the submission of innovative models and approaches to the training and workforce development of health and social care professionals and carers, as well as initiatives focusing on the needs and wellbeing of caregivers of people living with dementia. Contributions may be related but not limited to the risk and preventive/protective factors predicting diverse caregiver experiences, novel techniques, diagnostic instruments and treatment tools, advancements in digital technology, psychosocial interventions and culturally relevant treatment approaches, and innovative policy and best practices—all of which could help caregivers enhance personal resources (e.g., coping skills, resilience) to effectively overcome caregiving challenges and adversity, enhance positive mental health, better quality of life and enhanced well-being.
