

Special Issue

Nursing Care for Older Health

Message from the Guest Editor

The increase in life expectancy has brought with it a series of challenges to the health system and the welfare system in the various countries. Many older adults are exposed to a number of age-related diseases such as dementia, heart disease, hypertension, arthritis, and stroke. These chronic diseases involve significant physical and mental disabilities and pose significant challenges to the elderly population. This Special Issue will discuss issues related to the role of the health and welfare system in ensuring nursing care for older adults, the economic challenges facing the public system as a result, the economic challenges of households to ensure nursing care for older family members, and social consequences involving the need for family members to arrange nursing care for the older adults in the family. This Special Issue may also examine manpower-related issues related to the provision of nursing services to older adults, technological changes that are expected to occur in the coming years in the nursing system, and the implications of the COVID-19 pandemic on the challenges of regulating nursing care for older adults.

Guest Editor

Prof. Dr. Aviad Tur-Sinai
