

Special Issue

Data Driven Insights in Healthcare

Message from the Guest Editors

This Special Issue aims to show how data exploration can result in new possibilities and improve our understanding of current theories and practice. Studies on the use of AI and machine learning are encouraged, but this Special Issue is not limited to such methods. The themes and article types include using data analytic methods on data sets to gain insights about the relationships among variables and the insights the data provide to healthcare researchers and practitioners. In addition, review articles that address how such data-driven approaches can be used in the future are welcome.
