

## Special Issue

# Biological and Clinical Aspects of the Treatment of Schizophrenia and Related Disorders: Second Edition

### Message from the Guest Editor

The present Special Issue aims to summarize new evidence pertaining to the role of biological systems interacting with dopamine and other neurotransmitters, and their implication in the occurrence of psychotic symptoms and treatment responses. The role of stress hormones and other hormonal compounds in the clinical presentation (phenotype) and response to treatment will also be explored. Articles presenting evidence regarding the effectiveness of pharmacological and non-pharmacological interventions in treating schizophrenia and related disorders are also welcome, with a special emphasis on treatments targeting emotions and cognitive symptoms. The impact of physical health on psychotic symptoms and vice versa is also a topic of interest in psychotic populations.
