

Special Issue

The New Advances in Cardioprotection

Message from the Guest Editors

This Special Issue of Healthcare seeks commentaries, original research, short reports, and reviews on recent advances in the field of cardioprotection with a focus on new drugs, targets, and approaches to treating cardiac ischemic/reperfusion injuries, and the use of mechanical devices in the treatment of heart failure, cardiogenic shock, or life-threatening arrhythmias. We would like to invite the authors' views on the use of cardioprotective devices in patients undergoing percutaneous procedures and cardiac surgery. Additionally, we are looking for papers that can elucidate the cardioprotective effects of newer therapeutic measures in high-risk populations, such as those with diabetes, cancer, or multi-system disease.
