Outcome Measures and Assessment Tools in Rehabilitation

Message from the Guest Editors

We are pleased to invite you to provide clinicians and researchers with evidence-based recommendations regarding what outcome measures should be used in rehabilitation, attracting review articles which describe the current state of the art and validation studies that culturally adapt current assessment tools providing new information about the psychometric properties of existing or new assessment tools. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Systematic reviews and meta-analyses of existing assessment tools in rehabilitation.
- Validation studies of existing assessment tools.
- Psychometric studies measuring the psychometric characteristics of assessment tools.
- Comparative studies of different assessment tools measuring the same area.
- Cross-sectional studies for cultural adaptation of assessment tools in specific countries.

We look forward to receiving your contributions.
