

## Special Issue

# Oral Rehabilitation from Oral and Dental Diseases

### Message from the Guest Editor

Oral functions are one of the key factors for maintaining or enhancing systemic health. Oral functions include a number of functions, such as mastication (chewing), deglutition (swallowing), phonation and smiling. It has been reported that these are closely related to nutrition, as well as physical and cognitive functions. However, oral and dental diseases such as cancer, infection—including caries and periodontitis—inflammation, traumatic injury and congenital diseases often disrupt oral functions and affect the patient. Recently, oral frailty and oral sarcopenia due to aging and pathologic conditions have been introduced. The aim of this Special Issue is to discuss the effect of oral rehabilitation from oral disease and pathologic conditions, as well as oral frailty and oral sarcopenia, which are remarkable topics in oral rehabilitation. The editor strongly hopes that this Special Issue can contribute to the evolution in oral rehabilitation and will provide a significant benefit to readers.

### Guest Editor

Dr. Yoichiro Ogino

Section of Fixed Prosthodontics, Division of Oral Rehabilitation, Faculty of Dental Science, Kyushu University, 3-1-1 Maidashi, Higashi-ku, Fukuoka 812-8582, Japan
