

Special Issue

Periodontal Diseases and Oral Health

Message from the Guest Editors

Periodontitis is one of the most common components of the global burden posed by chronic diseases.

Epidemiological studies showed increased frequency and severity of periodontitis in the global population with tendency to expand with age. It has also been linked to various systemic conditions. In this Special Issue, we aim to publish some new relevant information and results from recent investigations focusing on different aspects of Periodontal Diseases including etiopathogenesis, diagnosis, prevention, and treatment of different periodontal conditions in the aspect of oral and general health.
