

# Special Issue

## Pharmacist-Led Intervention

### Message from the Guest Editor

As healthcare advances, adverse drug reactions, drug–drug interactions, medication errors and the use of potentially inappropriate medications are increasing. The role of pharmacists extends beyond medication supply. Pharmacists possess the skills and knowledge to conduct a patient evaluation, collaborate with physicians to encourage appropriate prescribing, and give advice to patients regarding the use of medications. Pharmacist-led interventions are thought to be a significant strategy to optimize medication use. This Special Issue of *Healthcare* seeks commentaries, original research, short reports, and reviews pertaining to the investigation of the effectiveness and safety of medications and the construction of health systems by pharmacists. An aim of the Special Issue is to highlight the importance of pharmacists in clinical settings, and it is envisioned that pharmacist-led interventions will be introduced.

- pharmacist
- medication management
- pharmaceutical care
