

## Special Issue

# Preventive Oral Health Strategies and Oral Health Status

### Message from the Guest Editors

The increasing number of fragile patients represents a challenge due to the high number of procedures and the risk of directly compromising clinical outcomes and increasing therapeutic failures. For this reason, the etiological factors for the development of oral diseases as well as the presence of systemic and local factors should be widely investigated to understand how to prevent these diseases. The role of risk factors should be carefully considered to prevent oral diseases because they can change the susceptibility or resistance of individuals. Systemic risk factors for oral diseases can include behaviors, such as smoking, medical conditions (i.e., poorly controlled diabetes, obesity, stress, osteopenia), and inadequate dietary consumption. The aim of this Special Issue is to provide information with updated findings about the latest developments in the field of oral health and preventive strategies. It is our pleasure to invite you to submit research papers (both in vivo and in vitro), short communications, or systematic reviews related to the topics of this Special Issue.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

#### Journal Rank:

JCR - Q2 (Health Policy and Services) / CiteScore - Q1  
(Leadership and Management)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
