

Special Issue

Reducing Waste in Healthcare

Message from the Guest Editor

The concept of "waste" involves different aspects. For the general idea, "waste" represents a significant cost loss. In this special issue, we encourage author(s) to define the "waste" and submit a research study or a case example in the healthcare system. The given research study or case example will be an illustration of the concept of "waste management" in the healthcare system and how the concept can be applied to the healthcare to eliminate the waste. Any research study or case example regarding improvement strategies used to decrease the waste in healthcare is also the focus in the special issue, in which the improvement indexes of decreasing the waste in healthcare should be clearly illustrated in order to let readers easily realize the feasibility and how to use the proposed improvement strategies to eliminate the waste in healthcare. Hence, in the submitted paper, a systematic conception of waste management will be clearly illustrated; thus, the waste management will lead to a decrease in expenditures and human resources in the healthcare system.
