Special Issue

Rehabilitation and Robotics: Are They Working Well Together?

Message from the Guest Editor

Clinical studies on the use of robotic technologies in the rehabilitation field (RR), ranging from the field of disabling pathologies of neurological origin up to the field of injuries (included the ones into the work) and/or the support of the elderlies have gained increasing attention. In the last years, we have assisted in increasing use of the robotic devices alone and/or in association with other rehabilitation technologies. The following topics, though not exhaustive, will be considered: continuous innovations in the field. including those related to the COVID-19 pandemic; the full introduction of robots in this setting; initial studies on robots with empathy; the problem of the introduction of this technology into an effective and complete care model. This Special Issue of *Healthcare* welcomes commentaries, original research, short reports, and reviews on the challenges faced by health systems in this field.
