

Special Issue

Advances in Treatment of Substance Use Disorders (SUDs)

Message from the Guest Editor

Substance use disorders are the leading cause of disability worldwide. This major public health issue impacts patients, caregivers, families, and communities across the world. The lack of successful treatments is related to the limited neurobiological targeting of the currently approved substance use disorder treatments, poorly identified mechanistic and clinical outcome markers, and inadequate integration of treatment approaches for comorbid substance use disorders and mental illnesses. The articles in this Special Issue of Healthcare feature an international collection of professional contributions related to developments in novel pharmacologic and non-pharmacologic substance use disorder interventions.
