

# Special Issue

## Smart Home Care

### Message from the Guest Editors

The challenge of ageing populations has led to the development of technical platforms aiming to support health and care services. Given the effort to move to an in-home care model as much as possible, the contribution of information and communication technologies (ICT)-enabled care can transform modern houses to smart homes able to support the needs of elderly people, chronic patients, and persons in need of guidance and care due to age-related conditions or disabilities. This Special Issue welcomes contributions of studies focused on these advantages and challenges of Smart Home Care, based on various technological platforms and covering all aspects of care. We are interested in studies and reviews focused on the evaluation of Smart Home Care services, rather than reports of technological breakthroughs.
