

Special Issue

Surgical and Non-surgical Laser Applications in Dentistry: An Update

Message from the Guest Editors

This Special Issue proposes to provide a meeting point between the various methods and types of lasers in dentistry and oral surgery and thus evaluate the current state of the art and provide information as standardized as possible on which laser is most suitable for a specific dental/oral mucosa therapy/treatment. Reviews of the literature are welcome, as well as case reports or case series on specific topics. Potential topics include, but are not limited to: standardized laser technique and parameters for oral mucosa disease treatments, standardized laser technique and parameters for tongue and labial frenectomy, laser use in the surgical management of potentially malignant and malignant lesions of the oral mucosa, the state of the art in laser application in periodontology, laser-assisted smile design, soft- and hard-tissue laser crown lengthening and crown lengthening, laser treatment of periimplantitis, histological assessment of oral tissue-laser interaction, laser teeth whitening, laser applications in endodontics, laser photobiomodulation (LLLT), and photodynamic laser therapy.
